Devon Wieczorek

Senior Full-Stack Engineer

New Jersey | Devon.Wieczorek@iCloud.com | (201) 527-7500
Devon.Codes | GitHub.com/DevonWieczorek | LinkedIn.com/in/DevonWieczorek

SUMMARY

Senior full-stack engineer with 8 years of experience building production web platforms, grounded in deep React and front-end expertise and now shipping end-to-end systems: Node and Postgres services, data pipelines, and third-party API integrations (Meta, Google Ads, TikTok, Amazon, Shopify, Bill.com). Backs every system with automated tests, CI, and documented architecture decisions. Uses AI coding agents to ship faster without lowering the bar for review, reliability, or security.

SKILLS

Languages: TypeScript, JavaScript, SQL, Python, HTML, CSS/SCSS/LESS, PHP, Bash
Front End: React, Next.js, React Native/Expo, Redux, Zustand, Tailwind CSS, React Three Fiber, AG Grid
Back End and Data: Node.js, Express, PostgreSQL, Supabase, Airbyte, REST/GraphQL APIs, webhooks, OAuth
Build and Infrastructure: Vercel, DigitalOcean, Docker, GitHub Actions CI/CD, Webpack, Vite, systemd
Testing and Quality: Vitest, Jest, React Testing Library, Playwright, ESLint/Prettier, code review, ADRs
AI Tooling: Claude Code, Model Context Protocol (MCP) servers, OpenAI API, LLM-assisted development workflows
Practices: Agile/Scrum, technical documentation, mentorship and onboarding, accessibility (a11y), i18n, A/B testing

PROFESSIONAL EXPERIENCE

AI Developer | Wired2Scale — Remote | June 2026 – Present

CPG growth and media-buying agency. Own the agency's reporting and billing platforms end to end and build internal automation for a team managing paid media for 30+ consumer brands.

- Built and own an automated reporting platform (TypeScript/Node, Supabase, Playwright, Slack API) that pulls spend and revenue from 11 ad and commerce APIs, including Meta, Google Ads, TikTok, Shopify, Amazon SP-API, and Northbeam, and posts per-client KPI report cards on schedule, replacing ~3–5 hours a day of manual reporting.
- Brought reported metrics to parity with client source-of-truth sheets, cutting one revenue gap from ~30% to within ±2.5% and taking a daily ad-cost metric from 0% to 100% agreement over 37 days; backed by 440+ automated tests, CI, and ~100 documented architecture decisions.
- Built a full-stack invoicing platform (Next.js, Postgres/Supabase, Vercel) that ingests ad spend from 6 platforms via Airbyte, applies tiered and subscription fee logic, and pushes invoices to Bill.com through its API and webhooks; automated the twice-monthly spend pull, saving ~8 hours of manual work a month.
- Data audits surfaced ~$900K+ of ad spend under accounts unmapped in the billing system, and restored ~$140K of spend history previously judged unrecoverable by fixing an ingestion lookback window.
- Shipped v1 of an ad-launch tool in the company's internal AI platform that parses copy docs, applies naming conventions, and builds ad drafts through a third-party launcher API; led its migration into the platform: schema, background jobs, API, and UI.
- Resolved a production database outage (disk full, read-only state), wrote the incident report, and authored a disaster-recovery plan covering all three production systems; provisioned the production host on DigitalOcean and migrated engineering to a GitHub organization.
- Built a Claude Code plugin marketplace for the team (planner, builder, and auditor agents with a human merge gate), added automated AI pull-request review to CI, and launched an internal knowledge assistant red-teamed for prompt injection.
- Led the evaluation that approved a 1Password rollout, moved team credentials out of Slack, and designed SSO and access-control architecture (Google Workspace identity, Supabase authorization) for ~35 staff; onboarded two engineers with setup and system docs.

Professional Development | Career Break — Self-directed | March 2025 – June 2026

- Expanded from front-end into back-end and data engineering through the four certifications below, and built personal projects in React, Next.js, and TypeScript, including the 3D portfolio and a browser roguelike game.

Senior Front-End Engineer | Rockstar Games — New York, NY | January 2023 – March 2025

- Led the migration of a legacy React codebase to TypeScript and added Jest test coverage, improving type safety and maintainability across shared components.
- Helped consolidate scattered repositories into a single codebase, simplifying builds, dependency management, and releases.
- Built and launched the Circoloco Records website in React, and converted the legacy Red Dead Redemption 2 website to React.
- Built internal tools that automated team workflows, turned stakeholder requests into technical requirements, and onboarded and mentored new engineers through hands-on pairing and documentation.

Digital Marketing Developer | Rockstar Games — New York, NY | August 2020 – December 2022

- Designed and maintained the custom CMS behind most content across Rockstar's web properties (~6M visits a month), used by ~15 designers, content managers, and engineers.
- Built and released the Grand Theft Auto: The Trilogy website, migrated the legacy GTA V and GTA Online websites, and created CLI tools that automated common build and deployment tasks.
- Led documentation standards across the codebase and interviewed engineering candidates.

Software Developer II | Fluent, Inc. — New York, NY | May 2019 – August 2020

- Built a React WYSIWYG editor and marketing-funnel builder that boosted productivity for non-technical teams.
- Built a Node.js CLI to bootstrap, develop, and deploy microsites, plus reusable React component and SASS libraries shared across projects.
- Interviewed stakeholders to find workflow bottlenecks, then designed and built automated solutions.

Front-End Developer | Fluent, Inc. — New York, NY | August 2017 – May 2019

- Led development of scalable consumer-facing sites, including TheSmartWallet.com and FindDreamJobs.com; built custom CI/CD pipelines and introduced git workflows that sped up the release cycle.

SELECTED PROJECTS

Portfolio Terminal (Devon.Codes) — *Next.js 15, React 19, TypeScript, React Three Fiber, OpenAI API*

- Interactive 3D office scene with a terminal-mode portfolio and an AI "ask" command served by a server-side OpenAI route with file search; Zustand state, Jest/RTL test suite, and CI/CD to Vercel via GitHub Actions.

React-WordPress Microsite Framework — *React, headless WordPress, Node.js CLI*

- Headless WordPress and React framework with a plugin system and a CLI scaffolder (React-WP-CLI) for spinning up new microsites.

CERTIFICATIONS

- **React Native & Expo**, Meta (April 2026)
- **Intro to Supabase**, Scrimba (February 2026)
- **Database Design and Basic SQL in PostgreSQL**, University of Michigan (December 2025)
- **Developing Back-End Apps with Node.js and Express**, IBM (December 2025)

EDUCATION

B.A., Communication and Media Studies | Ramapo College of New Jersey
